📢 About me

I'll list a couple of important achivments:

- My evolution at Anadeea - In few years I managed to reinvent myself in so many ways.

- Participated in GPEC awards - One of our clients managed to win 2'nd place in his category.

💼 Professional experience

Experience by departments	IT Software : **7 years** Client Service / Call Center: **1 year and 4 months** Administrative / Logistics: **4 months** Graphics / Web design / DTP: **2 years and 10 months**

Dec 2018 - present

Software Developer - Gulisoft SRL

Cluj-Napoca | IT Software | IT / Telecom

Started to work with some popular frameworks like Yii and Laravel.

I've build a small CMS in Laravel with some React integration in the admin section.

I've added internationalization to an already build app made with Yii

I've made a responsive SPA using React

Web Developer - ANADEEA Advertising

Bucharest | IT Software | IT / Telecom

I want to add that most of my work now at Anadeea is backend development and the main technologie used is PHP. We don't use known framework like Laravel, Symfony or CakePHP, but a in-house framework, developed over 10 years.

- I started with small projects, "one page" products or small modifications on already implemented features;

- I also had to learn about how SQL/MySQL databases are working with PHP;

- I added a new product to the company portfolio, a small CMS platform for companies websites;

- Participated in the development of a national network websites owned by Anadeea in which I had to implement an ad system;

- We launched an important update to the ecommerce platform due to the need of mobile presence;

- I've worked very well with 3'rd parties in implementing online payments, billing or delivery systems with our platform;

- My presence on clients meetings was almost always required in converting the client needs into a final new feature of his online s

because of my overall understanding of the all process.

Web Designer - ANADEEA Advertising

Bucharest | Graphics / Web design / DTP | IT / Telecom

- After learning how to edit photos, I've started juggle with banners and ads;
- In the company portfolio were also some pharmaceutical and book stores which had some phisical printed materials. This got me magazine templates and mockup using programs like Quark and CorelDraw;
- Templates and mockups in phisical world have their correspondent in the online enviroment. So I started learning HTML and CSS develop new ideas for our client's online shops;
- New ideas meant, sometimes, the need to adapt your infrastructure or to add new parts to it. So my new view took me in the jQue Javascript component of my evolution in Anadeea that led to a better understanding of UI/UX ingredient;
- But my stubbornness in implementing this new ideas weren't always sufficient and accepted by the development department, so had to get into another field, PHP programming that led to another promotion.

Product Specification Specialist - ANADEEA Advertising
Bucharest | Graphics / Web design / DTP | Advertising / Marketing / PR

Anadeea is a small advertising company with most of its services targeting online environment. Their ecommerce platform "e-volut gathered more than 100 clients in over 10 years of experience.

I've started with a part time job at Anadeea, which later would become my second home.
- Understanding the CMS platform behind the ecommerce platform they were developing;
- To document about new products and gather all the information in an specific structure for a good online experience for the end u and also for search engines;
- Contributing to the development of the backend (cms) and frontend (ecommerce platform) by submitting new ideas for future feat
- Adding new products to the online shop, which involved photo editing for the product images, which led me to learning Photoshop promotion.

Projects

Centralizing and Reporting platform

period Aug 2016 - Nov 2016

In this project, one of our clients, whose evolution led to building more websites, required a centralized tool where he could observe and manage the orders and the flow of product stock. The interaction between the central platform and it's websites is made real time with the help of representational state transfer.

Technologies used:
- REST architecture;
- OOP and Procedural PHP programming;
- Ajax, Javascript and jQuery;
- HTML and CSS.

Billing API

period Mar 2016 - Apr 2016

This project was for one of our clients who wanted to integrate a billing tool with our ecommerce platform. After being given access to their documentation and the help of the support team, I managed to integrate and succesfully test the billing api.
Technologies used:
- SOAP messaging protocol with XML;
- OOP and Procedural PHP programming;
- Ajax, Javascript and jQuery;

Monitoring and Reporting platform

period Mar 2014 - May 2014

In this project we aimed to offer our clients who were not so familiar with other similar products (for example Google Analytics) a easy to use and simplified tool to keep track their client's behaviour. It keeps track of the user's referral site, visited pages, and actions like adding to cart or making an order.
Technologies used:
- OOP and Procedural PHP programming;
- Ajax, Javascript and jQuery;
- HTML and CSS.

Certifications

PHP/Mysql Advanced Programmer

period Jan 2016 - Apr 2016

InfoAcademy :: Certificate of Course Completion :: Bucharest

- Use the SQL language to create databases and tables, manipulate data and execute queries;

- Use database indexes to improve the speed of operations on database tables;

- Write PHP scripts that interact with MySQL databases using various PHP database extensions (mysql, mysqli, PDO);

- Declare and use PHP 5 classes, interfaces and obejects;

- Implement exception handling in an application;

- Work with local and remote files;

- Build HTML forms that allow file upload and process upload files;

- Use PHP streams for reading and writing data;

- Create and manipulate XML documents using SimpleXML or DOM XML;

- Describe some well-known security vulnerabilities/attacks and write code that avoids them.
